

## CLAIMS

1. An electrophotographic photoreceptor comprising a conductive support and a photosensitive layer formed on the conductive support, with an undercoat layer provided between the support and photosensitive layer, characterized in that the undercoat layer contains a polyimide resin and the photosensitive layer contains at least one of the compounds represented by the following formula [I] and [II] as a charge transport agent:

Formula [I]

(in the above formula, R<sub>1</sub> and R<sub>2</sub> independently represent an alkyl group having 1-6 carbon atoms which may have a substituent, and R<sub>3</sub> represents a hydrogen atom or a dialkylamino group in which at least one alkyl group has 2 or more carbon atoms),

Formula [II]

(in the above formula,  $R_4$ - $R_7$  may be the same or different and independently represent a hydrogen atom, a halogen atom, an alkyl group or alkoxy group having 1-6 carbon atoms or an aryl group which may have a substituent,  $R_8$  represents a hydrogen atom, a halogen atom, an alkyl group or alkoxy group having 1-6 carbon atoms, an aryl group which may have a substituent, an alkenyl group or alkadienyl group which may have a substituent or a group represented by the following formula [II'], and  $n$  represents an integer of 0 or 1),

Formula [II']

(in the above formula,  $R_9$  and  $R_{10}$  may be the same or different and independently represent a hydrogen atom,

a halogen atom, an alkyl group or alkoxy group having 1-6 carbon atoms or an aryl group which may have a substituent, and n represents an integer of 0 or 1).

2. An electrophotographic photoreceptor according to claim 1, wherein the undercoat layer contains a polyimide resin represented by the following formula [III]:

Formula [III]

(in the formula, X is a divalent polycyclic aromatic group in which the aromatic rings may be linked by a hetero-atom and n is an integer which shows a polymerization degree).

3. An electrophotographic photoreceptor according to claim 1, wherein the undercoat layer has a thickness of 1.0-50  $\mu\text{m}$ .

4. An electrophotographic photoreceptor according to claim 1, wherein the undercoat layer contains titanium oxide, and the weight ratio of the polyimide resin and the titanium oxide is in the range of 2:1-1:4.

5. An electrophotographic photoreceptor according to claim 1, wherein the undercoat layer has a two-layer structure comprising a layer containing a

polyimide resin and a layer comprising a thermosetting resin or a thermoplastic resin formed on the layer containing polyimide resin.

6. An electrophotographic photoreceptor according to claim 1, wherein the conductive support is a tube subjected to no cutting process.

7. An electrophotographic apparatus in which a contact charging means is applied to the photoreceptor of any one of claims 1-5.

8. An electrophotographic apparatus in which an exposing means using a semiconductor laser is applied to the photoreceptor of any one of claims 1-5.
